SUMMARY

Senior Backend Engineer with 10+ years of experience designing and building scalable distributed systems across fintech, banking, and insurance domains using Java and Kotlin. Expertise in reactive microservices (Spring WebFlux), orchestration-based workflows (Camunda), and performance optimization delivering 30%+ throughput improvements. Strong background in system design, production reliability, and mentoring engineering teams. Hands-on experience building AI-powered backend platforms using Retrieval-Augmented Generation (RAG), vector search, and LLM integrations.

SKILLS

Languages: Java, Kotlin (Coroutines), SQL

Frameworks: Spring Boot, Spring WebFlux, Camunda

Backend: REST APIs, WebSocket, Microservices, Distributed Systems, Reactive Systems

Databases & Cache: PostgreSQL, Oracle, Redis, pgvector

Messaging: Kafka

Cloud: AWS (ECS, EC2, S3, RDS, ElastiCache, API Gateway, IAM, VPC, CloudWatch)

Containers & Orchestration: Docker, OpenShift (Kubernetes-based)

CI/CD & Build Automation: Jenkins, TeamCity, GitHub Actions, Gradle, Maven

Architecture: Scalability, High Availability, Performance Optimization, Event-Driven Design

AI/Modern Stack: RAG, Embeddings, Vector Search, LLM Integrations, Spring AI

Leadership: Code Reviews, Mentoring, Technical Leadership, Agile Delivery

FEATURED PROJECT

AI Knowledge Assistant (RAG Platform) | Personal Project

Java, Spring Boot, PostgreSQL (pgvector), Redis, WebSocket, Docker

- Built AI-powered knowledge assistant for conversational Q&A over private documents.
- Implemented ingestion pipeline with embeddings generation and vector similarity retrieval.
- Designed real-time multi-user chat sessions with isolated user sessions over WebSocket.
- Added caching, scalable service architecture, and production-style backend patterns.
- Containerized deployment with Docker for local and cloud-ready environments.

WORK EXPERIENCE

Neoflex | Senior Software Developer

01/2014 — 10/2024

Senior Backend Engineer — VTB (02/2020 – 10/2024)

- Led migration from blocking architecture (Spring MVC) to reactive stack (Spring WebFlux + R2DBC), increasing system throughput by 30% and improving stability under peak load.
- Designed and implemented a microservices-based car insurance platform with independent service deployment and fault isolation, allowing seamless provider replacement, reducing time-to-market by 20%.
- Built mortgage insurance services with automated renewals and notifications, increasing customer retention by 15%.
- Led code reviews, mentored engineers, and improved delivery velocity across the team.

Backend Engineer — SBI (12/2019 – 02/2020)

- Developed a secure two-factor authentication (2FA) platform for corporate banking customers.
- Improved maintainability through refactoring and engineering best practices.

Senior Backend Engineer — VTB24 (01/2018 – 12/2019)

- Eliminated peak-load production failures by implementing throttling and load-control mechanisms.
- Designed automated cleanup processes, reducing infrastructure growth costs.
- Created onboarding materials and technical training for new developers.

Backend Engineer — RNB (01/2014 – 12/2017)

- Developed core backend services for car-loan issuance platform.
- Increased automated test coverage to 90%, improving release reliability.
- Refactored legacy modules and mentored QA engineers and new team members.

EDUCATION

Saratov Chernyshevsky State University, Saratov, Russia

BS - Radiophysics and Electronics
